

— INSTITUTIONAL EXECUTION & DISCOVERY HANDBOOK

THE COMPLETE CLIENT TRADING MANUAL

The authoritative guide to navigating institutional Killzones, decoding live signal cards, mastering multi-timeframe charts, utilizing mathematical position calculators, and trading with institutional precision.

4 Institutional Killzones

Master Eastern Time boundary scans, 90-minute midpoint rescans, and session liquidity flows.

Signal Card Deconstruction

Every price band, exact fill state, conviction metric, live R:R readout, and order type explained.

Interactive Chart Overlays

Understand Entry Zones, Invalidation levels, TP1/TP2 targets, breakeven trails, and Bid/Ask spreads.

Mathematical Risk Control

Compute exact contract and lot sizes calibrated to protect prop firm challenge capital.

CONTENTS & NAVIGATION GUIDE

Welcome to the official **Manna Edge Markets 2.0 Client Handbook**. This manual was engineered exclusively from the perspective of an institutional trader and client. It provides a complete, button-by-button, timeframe-by-timeframe breakdown of the entire platform, eliminating ambiguity and providing the exact blueprint required to trade high-probability market setups with confidence.

 CLIENT PERSPECTIVE STANDARD

This document details only the client-facing web desk. Advanced backend infrastructure, automated data-feed diagnostics, and administrative control suites are strictly isolated from client operations to maintain a distraction-free, high-conviction execution environment.

01	Welcome & Core Trading Philosophy	Ch. 1
02	Accessing the Platform: Landing Page & 1-Click Client Demo	Ch. 2
03	The Master Clock: Killzones, Sessions & Every Timeframe Explained	Ch. 3
04	The Client Dashboard Header & Global Controls (Every Button)	Ch. 4
05	Filter Suite & Real-Time Discovery Tools	Ch. 5
06	Signal Card Anatomy: Every Pill, Level, Badge & Timestamp	Ch. 6

08	Risk Management & The Position Sizing Calculator	Ch. 8
09	Live Economic Calendar & News Protection Protocols	Ch. 9
10	The 6-Step Client Execution Routine & Golden Rules	Ch. 10

 ACCOMPANYING AUDIO & VIDEO OVERVIEWS

In addition to this complete written manual, you can access the **Audio Overview (MP3)** for hands-free listening on mobile devices or during market sessions, as well as the **Video Overview (MP4)** for a narrated visual tour of all platform features.

1. WELCOME & CORE TRADING PHILOSOPHY

CHAPTER 01

1.1 What is Manna Edge Markets 2.0?

Manna Edge Markets 2.0 is an institutional-grade market discovery and trade signaling terminal designed specifically for proprietary firm traders, professional intraday operators, and private fund managers. The platform continuously monitors high-volume global market sessions ("Killzones"), identifies structural imbalances and liquidity sweeps, and publishes actionable trade blueprints with exact price corridors.

In conventional retail trading, market participants often suffer from analysis paralysis, emotional hesitation, and overtrading during dead market hours. Manna Edge Markets solves these friction points by enforcing systematic, algorithmic discipline:

- **Session-Specific Scanning:** Calculations are strictly restricted to the highest-liquidity institutional turnover windows (London Open, New York AM Open, New York PM Open, and Asian Session).
- **Mathematical Risk-to-Reward (R:R):** Every setup must satisfy a minimum 1:2.0 Risk-to-Reward ratio, with multi-target expansions extending up to 1:3.0R or higher.
- **Corridor Execution:** Trades are defined by an *Entry Zone* rather than a single tick, accommodating real-world spread and slippage dynamics.
- **Automated Risk Elimination:** As trades expand into profit (reaching Take Profit 1), automated rules advise moving stop losses to breakeven, converting trades into risk-free runners.

1.2 Supported Asset Classes

Manna Edge Markets operates across two primary asset universes, giving multi-asset traders complete coverage:

ASSET CLASS	KEY TICKERS	POINT/PIP VALUE	BEST OPERATING KILLZONE
Equity Index Futures	NQ (Nasdaq 100), ES (S&P 500), YM (Dow Jones)	NQ: /pt (/tick) ES: /pt (.50/tick)	New York AM Open (08:00 – 11:00 ET) New York PM Open (13:00 – 16:00 ET)
Commodity Futures	GC (Gold Futures), SI (Silver Futures), CL (Crude Oil)	GC: /pt (/tick) SI: /pt (/tick)	London Open (02:00 – 05:00 ET) New York AM Open (08:00 – 11:00 ET)
Major Forex Pairs	EUR/USD, GBP/USD, AUD/USD, USD/CAD, USD/JPY	/pip per standard lot (0.1 lot = /pip)	London Open (EUR, GBP) New York AM (All Majors) Asian Session (AUD, JPY)

📌 CHAPTER 1 SUMMARY & KEY TAKEAWAYS

- **Systematic Discipline:** Manna Edge Markets eliminates emotional guesswork by detecting algorithmic order flow and structural liquidity sweeps.
- **Prop Firm Protection:** Every signal adheres to strict mathematical limits (minimum 1:2.0 R:R), preserving trader challenge capital.
- **Multi-Asset Agnostic:** Seamlessly covers CME Equity Index Futures, Commodities, and Forex Majors in a unified client terminal.

2. PLATFORM ACCESS & PRE-TRADING SETUP

CHAPTER 02

2.1 The Public Landing Page

Before logging in, clients arrive at the **Manna Edge Markets Public Desk**. The landing page provides real-time market synchronization, institutional feature breakdowns, and instant access pathways:

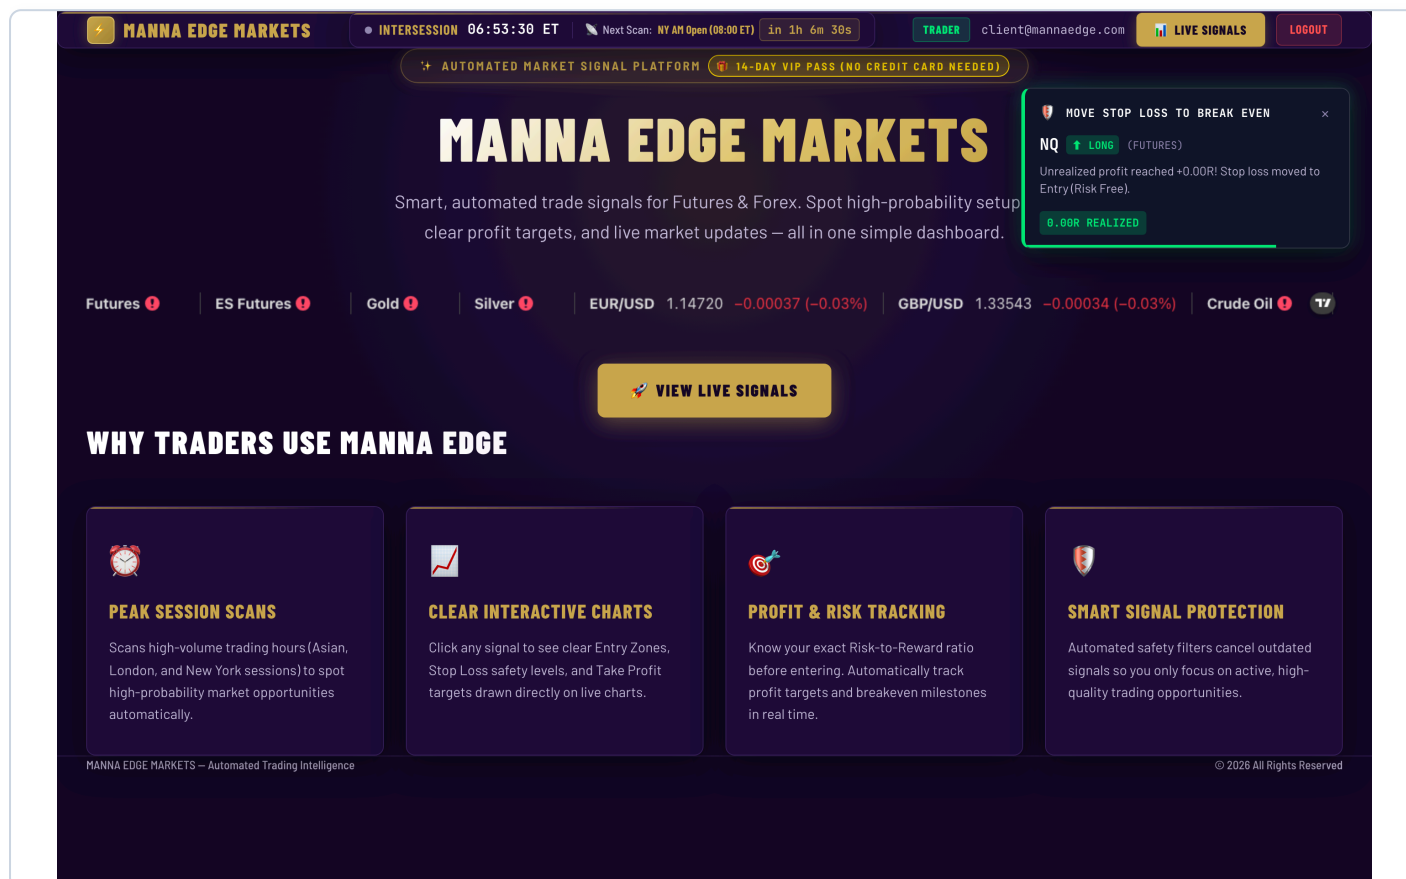

Figure 2.1 – The Manna Edge Markets Public Landing Page, featuring the live TradingView ticker tape, session clock, and 1-click client access.

Landing Page Components:

- **Live TradingView Ticker Tape:** Positioned across the header, this ticker streams real-time prices for NQ, ES, Gold (GC), Silver (SI), EUR/USD, GBP/USD, and Crude Oil (CL).
- **Session Clock Widget:** Displays the current Eastern Time (ET) status (e.g. **INTERSESSION 06:53 ET**) and a live countdown to the next scheduled institutional scan (**Next Scan: NY AM Open in 1h 6m**).
- **14-Day Free VIP Pass Banner:** Highlights the 14-day trial pass giving clients complete access to all CME Futures and Forex signals with no credit card required.
- **Call-to-Action Buttons:**
 - **VIEW LIVE SIGNALS** : Takes active members directly into the live signal terminal.
 - **1-Click Client Demo Access** : Allows prospective traders and reviewers to enter the live desk instantaneously with pre-configured VIP permissions.
- **Live Notification Toast:** Shows real-time trade event popups (e.g., **MOVE STOP LOSS TO BREAK EVEN**) when active setups hit target milestones.

2.2 Member Sign In & Client Demo Authentication

Navigating to the login portal (/login) presents the institutional client access card:

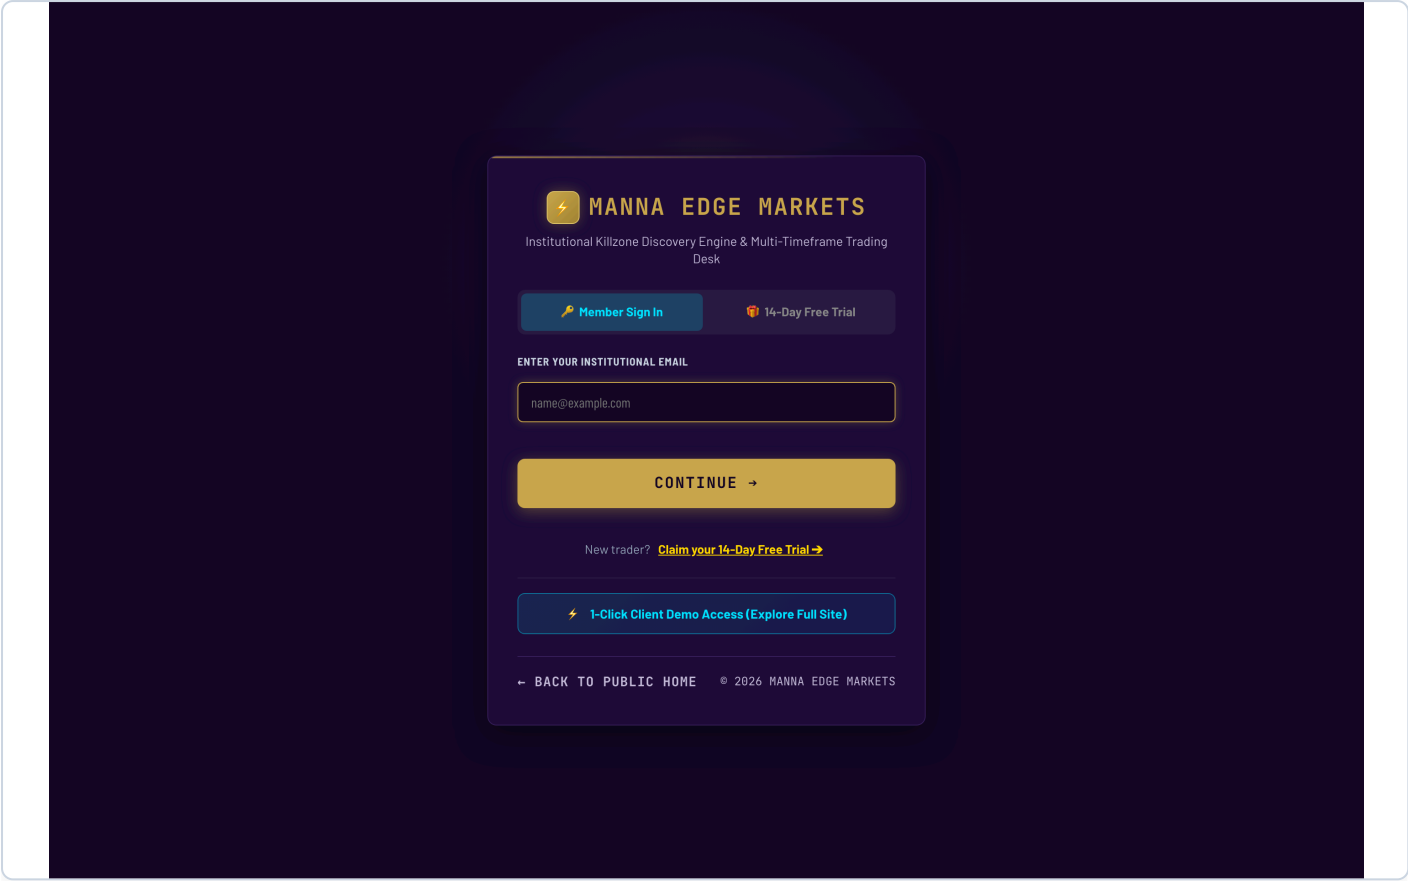

Figure 2.2 – Institutional Member Sign In portal featuring the 1-Click Client Demo button.

Authentication Methods:

- 1. **Registered Institutional Sign In:** Enter your registered institutional email, click **CONTINUE →**, and submit your secure password.
- 2. **1-Click Client Demo Button:** A single click on the blue-bordered **1-Click Client Demo Access (Explore Full Site)** button authenticates your browser immediately under a pre-provisioned institutional trader profile with full futures and forex permissions.
- 3. **14-Day Free Trial Registration:** Clicking the **14-Day Free Trial** tab lets new clients create an account with zero commitment.

📌 **CHAPTER 2 SUMMARY & KEY TAKEAWAYS**

- **Zero Friction Login:** Access the live desk instantly using either your registered email or the single-click client demo button.
- **Continuous Live Feed:** The public landing page streams real-time quotes and session scan countdowns even before logging in.
- **14-Day VIP Access:** New clients receive unrestricted access across all asset classes, chart modals, and position calculators.

3. THE MASTER CLOCK, KILLZONES & EVERY TIMEFRAME

CHAPTER
03

3.1 The Concept of Institutional Killzones

Algorithmic price discovery is not uniform throughout the 24-hour day. Major institutional liquidity providers, commercial banks, and high-frequency trading firms concentrate their capital turnover within predictable time windows known as **Institutional Killzones**.

Manna Edge Markets synchronizes all internal logic, algorithmic scans, and price markers to **Eastern Time (America/New_York)**. The system recognizes four distinct Killzones:

SESSION / KILLZONE	EASTERN TIME (ET)	PRIMARY ASSET FOCUS	SESSION DYNAMICS & LIQUIDITY PURPOSE
London Open	02:00 – 05:00 ET	EUR/USD, GBP/USD, Gold (GC), Silver (SI)	Captures the European session expansion. Sweeps Asian session liquidity pools and sets the daily initial directional impulse.
New York AM Open	08:00 – 11:00 ET	NQ Futures, ES Futures, All FX, Commodities	The premier high-volume session of the trading day. Concentrates peak institutional order flow and reacts to major US macroeconomic releases (CPI, NFP, PPI).
New York PM Open	13:00 – 16:00 ET	NQ Futures, ES Futures	Afternoon trend continuation and institutional re-hedging into the 16:00 ET equity cash close.
Asian Session	20:00 – 00:00 ET	AUD/USD, USD/JPY, FX Crosses	Tokyo and Sydney turnover. Establishes the initial overnight Asian range and liquidity benchmarks for the London open.
Interession	All Other Hours	All Assets	Consolidation and interbank turnover. Signals are monitored; new boundary scans pause until the next scheduled Killzone.

3.2 Session Boundary Scans vs. 90-Minute Midpoint Rescans

Unlike basic alert services that emit signals at arbitrary times, Manna Edge Markets follows a structured scanning rhythm:

- Session Boundary Scans:** Executed automatically at the precise start of each Killzone (02:00, 08:00, 13:00, 20:00 ET). The bias engine interrogates higher-timeframe order flow, detects fair value gaps and liquidity sweeps, and publishes the day's primary opportunity slate.
- 90-Minute Midpoint Rescans:** Exactly 90 minutes into each Killzone (03:30, 09:30, 14:30, 21:30 ET), the algorithmic engine assesses active setups. If fewer than two active setups remain viable and market conditions permit, a secondary scan executes to capture continuation opportunities.
- 5-Second Live Polling:** While new setups are only created during institutional scanning windows, the client terminal refreshes price feeds and calculations every 5 seconds to track live R:R, tick changes, and milestone hits.

3.3 Timeframes Used Across the Platform

Manna Edge Markets utilizes a dual-timeframe algorithmic confirmation framework:

MULTI-TIMEFRAME STRUCTURAL ARCHITECTURE

1. Higher Timeframe (1H Context): The 1-Hour chart is analyzed to establish structural order flow, trend direction, key premium/discount arrays, and major liquidity pools. A signal will never be generated against the prevailing 1H institutional bias.

2. Lower Timeframe (15M Execution): The 15-Minute chart is utilized to identify Fair Value Gaps (FVG), order blocks, and displacement candles to pinpoint the precise Entry Zone corridor and Invalidation level.

3. Interactive Chart Timeframes: In the client chart modal, traders can switch between **1m**, **5m**, **15m**, **1h**, **4h**, and **1d** views to inspect price action at any granular level.

CHAPTER 3 SUMMARY & KEY TAKEAWAYS

- **Eastern Time Standard:** All Killzones and timers are anchored to New York Eastern Time (ET).
- **Predictable Scan Times:** Major scans occur at session open (02:00, 08:00, 13:00, 20:00 ET) and at the 90-minute midpoint (03:30, 09:30, 14:30, 21:30 ET).
- **Confluence of Two Timeframes:** 1H charts determine overarching structural bias; 15M charts deliver the tactical entry corridor.

4. CLIENT DASHBOARD HEADER & GLOBAL CONTROLS

CHAPTER 04

Once authenticated, clients operate from the **Live Signals Dashboard** (`/dashboard`). The top navigation bar serves as your operational command center:

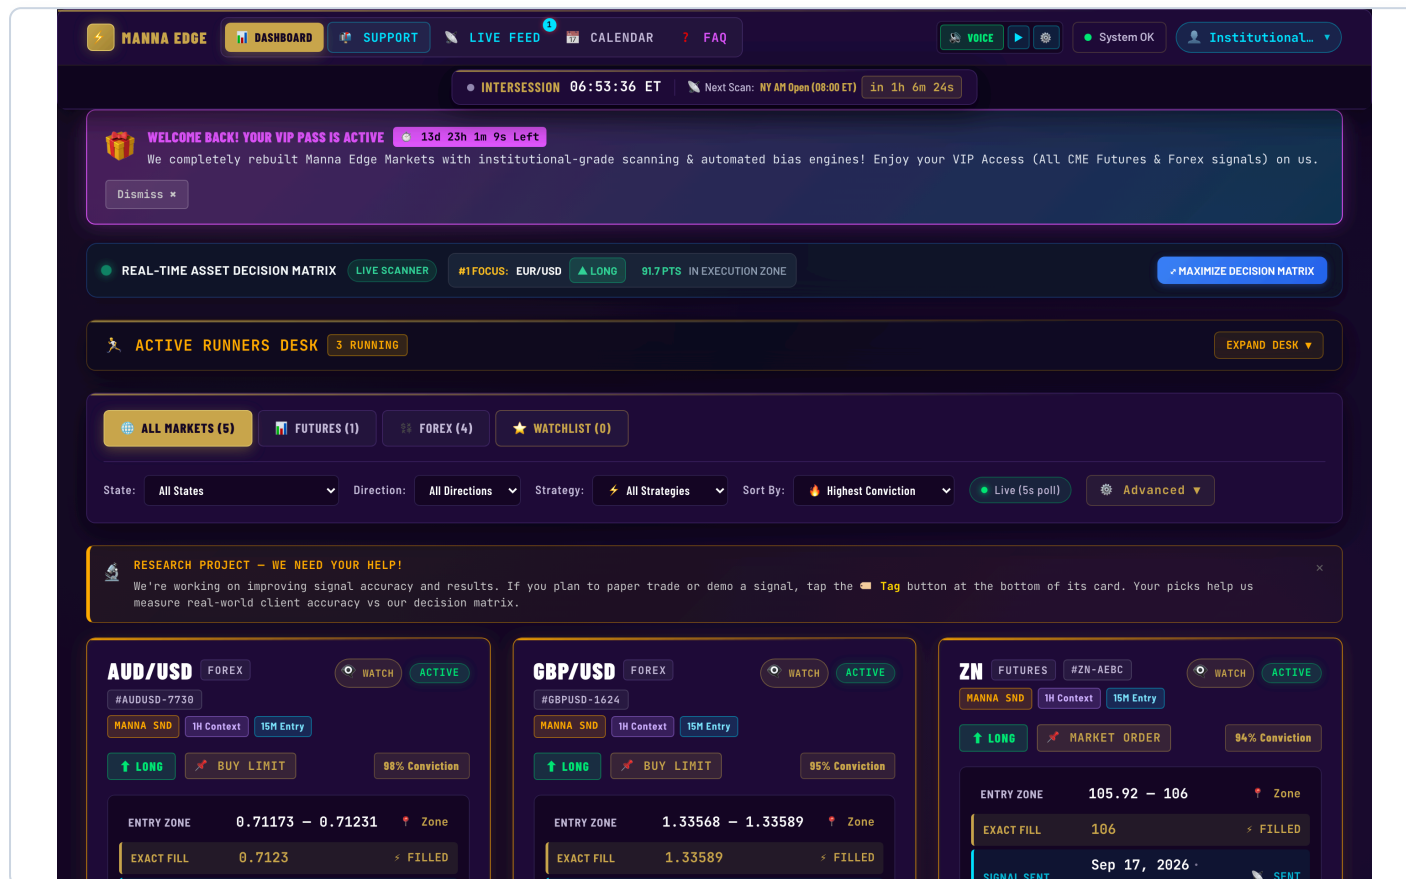

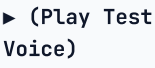

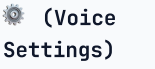

Figure 4.1 – The full Client Dashboard showing navigation buttons, session clock, decision matrix, and signal cards.

4.1 Every Navigation Button Explained

BUTTON / ICON	LOCATION	FUNCTION & CLIENT USAGE
 DASHBOARD	Top Left Nav	The primary workspace. Returns you immediately to the live signal cards grid, filter toolbar, and active runners desk.
 SUPPORT	Top Left Nav	Opens the Support Desk & Inbox Modal . Displays an unread message badge count when the desk responds to your questions. Use this to submit questions or report data inquiries.
 LIVE FEED	Top Left Nav	Opens the Live Activity Feed modal. Displays a real-time, chronological stream of all system events: new signals discovered, entries triggered, targets hit, and breakeven milestones reached.
 CALENDAR	Top Left Nav	Opens the Live Economic News Calendar Modal . Allows clients to view central bank rate decisions, CPI releases, and upcoming high-impact volatility events.
 FAQ	Top Left Nav	Opens the integrated Knowledge Base & FAQ Modal . Contains comprehensive explanations of platform formulas, Killzone definitions, and risk rules.
 VOICE /  MUTED	Top Right Actions	Master toggle for the Manna Speech Engine . Enables or disables vocal alerts for new signals, target hits, and session scan starts.

BUTTON / ICON	LOCATION	FUNCTION & CLIENT USAGE
 (Play Test Voice)	Top Right Actions	Triggers a sample synthesized audio announcement to verify your browser speaker volume and speech engine functionality.
 (Voice Settings)	Top Right Actions	Opens the Voice Engine Settings Modal . Allows you to select your preferred speech voice (e.g., Samantha, Daniel), adjust pitch, fine-tune speech rate, and toggle audio chimes.
 System OK	Top Right Actions	Circuit Breaker Indicator. Displays system health. If extreme exchange volatility or data connection anomalies occur, this flips to warning status to alert traders to exercise caution.
 Account Menu ▾	Top Right Actions	Displays your client email and access tier. Clicking opens the dropdown containing Change Password and Sign Out .

4.2 The Session Clock & Scan Countdown Banner

Anchored directly below the main header is the **Session Master Clock**:

 INTERSESSION 06:53:36 ET

 Next Scan: NY AM Open (08:00 ET) in 1h 6m 24s

- Live Session State:** Dynamically highlights whether markets are currently inside LONDON OPEN , NY AM OPEN , NY PM OPEN , ASIAN SESSION , or INTERSESSION .
- Countdown Timer:** Computes the exact hours, minutes, and seconds remaining until the next scheduled algorithmic scan executes.

4.3 The VIP Trial Welcome Banner

For clients on trial or active passes, a persistent purple banner displays:

 WELCOME BACK! YOUR VIP PASS IS ACTIVE [🕒 13d 23h 1m Left]

Clients can click **Dismiss** × to collapse the banner and maximize screen real estate.

CHAPTER 4 SUMMARY & KEY TAKEAWAYS

- Complete Control in Header:** Every operational tool (Support, Live Feed, Calendar, FAQ, Voice Engine) is one click away.
- Voice Announcements:** Never miss a trade setup while looking away; enable voice alerts with custom synthesized speech.
- Real-Time Session Awareness:** The Master Clock continuously informs you of the active session and scan countdown.

5. FILTER SUITE & REAL-TIME DISCOVERY TOOLS

CHAPTER 05

5.1 Real-Time Asset Decision Matrix

Directly above the signal cards sits the **Real-Time Asset Decision Matrix** banner:

● REAL-TIME ASSET DECISION MATRIX
LIVE SCANNER
#1 FOCUS: EUR/USD
▲ LONG
➔ MAXIMIZE DECISION MATRIX

91.7 PTS IN EXECUTION ZONE

This automated scanner ranks all monitored assets by algorithmic conviction and price proximity, immediately surfacing the **#1 Focus Setup** of the current session. Clicking ➔ MAXIMIZE DECISION MATRIX expands a full-screen correlation and ranking view.

5.2 Active Runners Desk

When signals successfully hit Take Profit 1 (TP1) and have their stop losses adjusted to breakeven, they graduate into the **Active Runners Desk**:

🏃 ACTIVE RUNNERS DESK
3 RUNNING
Trades currently risk-free and targeting TP2/TP3 expansion.
EXPAND DESK ▼

Clicking EXPAND DESK ▼ reveals running positions, letting you track extended profit targets without cluttering your primary pending setups grid.

5.3 The Market Filter Tabs

Clients can instantly filter the opportunity slate using the category tabs:

- 🌐 ALL MARKETS (5) : Shows all active and pending setups across both Futures and Forex.
- 📊 FUTURES (1) : Filters exclusively for CME Equity Index Futures (NQ, ES) and Commodities.
- 💱 FOREX (4) : Filters exclusively for Major currency pairs (EUR/USD, GBP/USD, AUD/USD, etc.).
- ★ WATCHLIST (0) : Displays setups you have personally starred by clicking the 👁 Watch button on their card.

5.4 Dropdown Filters & Sorting Options

Fine-tune your dashboard view with the high-speed dropdown suite:

DROPDOWN	AVAILABLE OPTIONS	PURPOSE & BEST USE
State:	All States, Active, Awaiting Entry, Runners, Resolved, Invalidated	Isolate trades that are ready to enter (Awaiting Entry) or monitor ongoing active trades.
Direction:	All Directions, Long Only (▲), Short Only (▼)	Align your dashboard with your higher-timeframe directional bias for the day.
Strategy:	All Strategies, Manna Elite V1.2, Manna SnD	Filter by algorithmic strategy engine (Supply & Demand vs. Multi-Timeframe Momentum).

DROPDOWN	AVAILABLE OPTIONS	PURPOSE & BEST USE
Sort By:	Highest Conviction, Newest, Best Live R:R, Closest to Entry	Prioritize trades offering the highest mathematical edge or closest proximity to execution.
Live Polling:	● Live (5s poll)	Indicates the active 5-second websocket/HTTP price update cycle.

CHAPTER 5 SUMMARY & KEY TAKEAWAYS

- **Instant Focus:** The Decision Matrix points out the single highest-conviction setup in real time.
- **Dedicated Runners Desk:** Keeps risk-free runner positions cleanly organized and separated from new entries.
- **High-Speed Filtering:** Filter by asset class, trade state, direction, or personal watchlist with a single click.

6. SIGNAL CARD ANATOMY: EVERY LEVEL & BUTTON

CHAPTER 06

Every trading opportunity identified by Manna Edge Markets is encapsulated within a **Signal Card**. Below is an exact breakdown of each element:

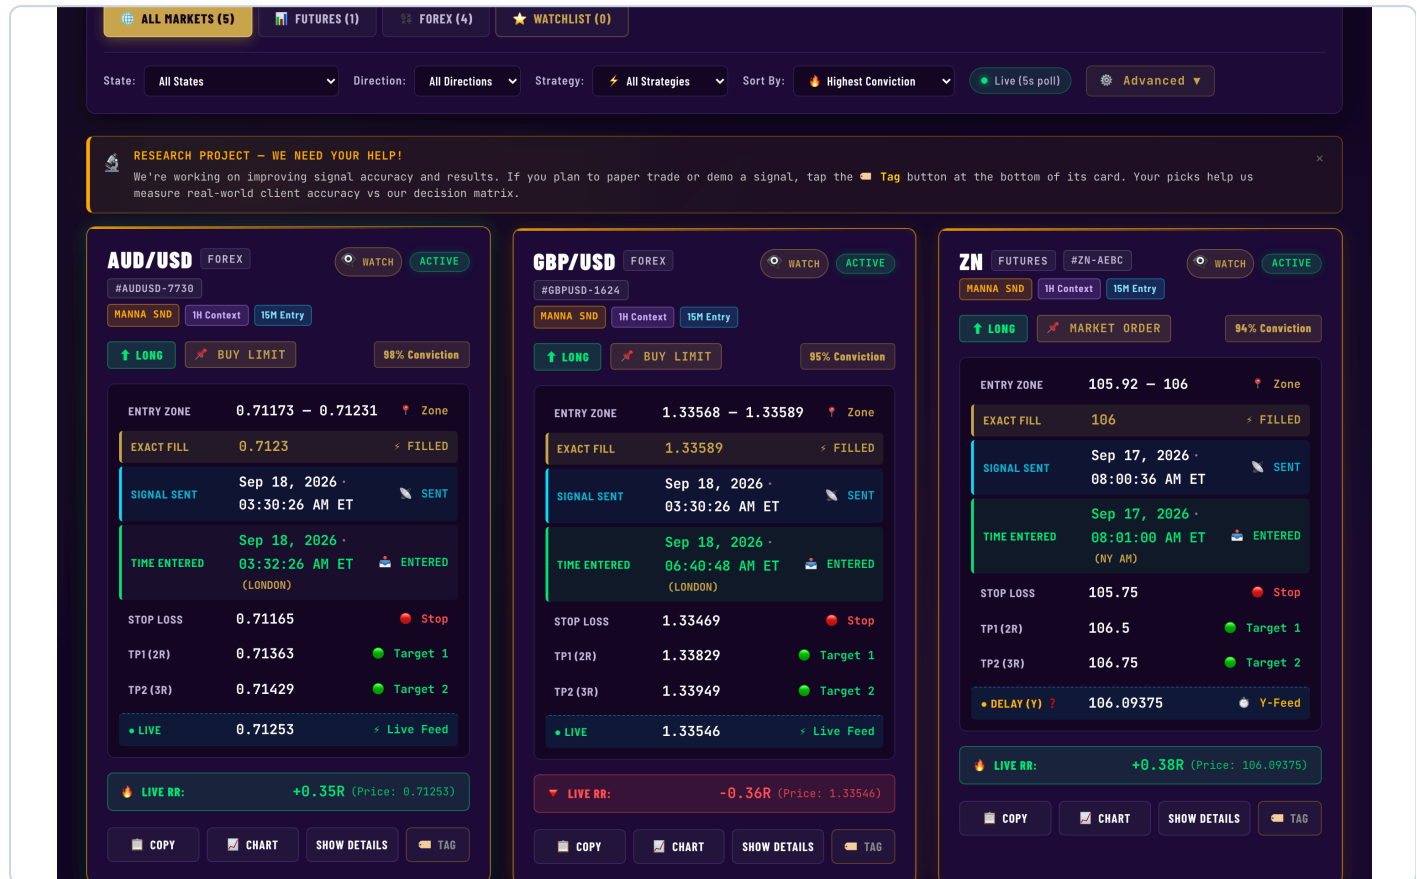

Figure 6.1 – Detailed view of Signal Cards showcasing entry zones, fill prices, sent/entered timestamps, stop loss, targets, live RR banners, and action buttons.

6.1 Top Header & Metadata Row

- **Instrument & Market:** Prominently displays the asset symbol and market class (e.g., **AUD/USD FOREX** or **ZN FUTURES**).
- **Trade ID Badge:** Unique reference identifier (e.g., **#AUDUSD-7730**). Clicking this badge copies the Trade ID directly to your clipboard.
- **Strategy Badge:** Identifies the algorithmic model that produced the setup (e.g., **MANNA SND** or **MANNA ELITE V1.2**).
- **Timeframe Badges:**
 - **1H Context**: Higher timeframe trend and structural support/resistance.
 - **15M Entry**: Lower timeframe execution zone.
- **Watchlist Button (👁 Watch):** Clicking stars the trade and adds it to your personal **Watchlist** filter tab.
- **Status Badge:** Indicates the lifecycle phase of the signal:
 - **AWAITING ENTRY**: Setup published; price has not yet entered the execution band.
 - **ACTIVE / IN ZONE**: Price is currently inside or has filled within the entry band.
 - **RUNNER**: TP1 hit; stop loss moved to breakeven; targeting TP2.
 - **RESOLVED**: Full trade lifecycle completed at profit.

- **INVALIDATED** : Structural price level breached prior to entry; setup cancelled.

6.2 Directional Bias, Order Type & Conviction

- **Bias Pill:**
 - **↑ LONG** : Buy opportunity.
 - **↓ SHORT** : Sell opportunity.
- **Recommended Order Type:**
 - **BUY LIMIT / SELL LIMIT** : Recommended when price is approaching the zone, allowing limit orders to be pre-placed at the entry price.
 - **MARKET ORDER** : Recommended when market momentum warrants immediate market execution within the active corridor.
- **Conviction Score:** An algorithmic rating (e.g., **98% Conviction**) measuring confluence factors including liquidity sweep volume, multi-timeframe trend alignment, and session Killzone timing.

6.3 The Mathematical Price Levels Grid

LEVEL LABEL	EXAMPLE VALUE	MEANING & EXACT BROKER EXECUTION RULE
ENTRY ZONE	0.71173 – 0.71231 Zone	The calculated price band. Place limit orders or execute market orders only when price trades inside this window.
EXACT FILL	0.7123 FILLED	The precise recorded fill price upon zone entry. Displayed once the trade transitions to active.
SIGNAL SENT	Sep 18, 2026 · 03:30:26 AM ET SENT	The exact date and Eastern Time timestamp when the algorithmic scan published the trade.
TIME ENTERED	Sep 18, 2026 · 03:32:26 AM ET (LONDON) ENTERED	The exact timestamp and session tag when market price tapped the entry corridor. If not yet filled, displays Awaiting Entry... PENDING .
STOP LOSS	0.71165 Stop	The hard structural invalidation level. If price hits this mark, the algorithmic trade thesis is void. Always place this stop loss immediately in your broker. When in breakeven, displays (BE) Risk Free .
TP1 (2R)	0.71363 Target 1	First expansion target (typically 2.0x risk). When hit, close 50% of position and move stop loss to breakeven.
TP2 (3R)	0.71429 Target 2	Structural target (typically 3.0x risk). Final exit or major liquidity objective for the remaining position.
● LIVE Price	0.71253 Live Feed	Streaming market price updating every tick. Flashes green on upticks and red on downticks.

6.4 Performance Banners & Every Action Button

- **Live RR Banner:**
 - Active trade: **LIVE RR: +0.35R (Price: 0.71253)** (or red during minor retracement).
 - Awaiting trade: **DISTANCE TO ENTRY: 0.45R (Price: 0.71298)**. Shows how close price is to activating your entry band.
- **Action Buttons:**

-  **Copy** : One-click clipboard export. Copies asset ticker, direction, entry zone, stop loss, and targets formatted cleanly for instant broker execution or trading journals.
-  **Chart** : Opens the interactive TradingView candlestick chart modal with all trade levels visually mapped out.
- **Show Details / Hide Details** : Expands the in-depth trade diagnostics:
 - **Signal Lifecycle Timeline:** Signal Sent timestamp, Time Entered timestamp, Time to Fill duration, and Total Trade Duration.
 - **Why This Trade Was Selected:** Algorithmic rationale detailing the Fair Value Gap displacement, order block alignment, and liquidity sweep score.
-  **Tag** : Allows clients to tag the trade as an active demo or personal paper trade to track results against the platform decision matrix.

CHAPTER 6 SUMMARY & KEY TAKEAWAYS

- **Self-Contained Trade Plans:** Every card provides entry band, exact fill, stop loss, TP1, and TP2 without needing external calculations.
- **1-Click Copy:** Press  **Copy** to copy full trade parameters to your broker in under two seconds.
- **Dynamic R:R Readout:** Track live unrealized profit in exact R-multiples ( , ) in real time.

7. THE INTERACTIVE CANDLESTICK CHART MODAL

CHAPTER 07

Clicking the  **Chart** button on any signal card launches the full-screen **TradingView Lightweight Chart Modal**. This tool provides visual verification of price action, support/resistance levels, and target milestones:

7.1 Visual Chart Overlays Deconstructed

VISUAL ELEMENT	COLOR & STYLE	TECHNICAL MEANING
Entry Zone Band	Shaded Cyan / Blue Corridor	The calculated high-probability execution window. Price entering this corridor confirms entry validity.
Entry Midpoint Line	Solid Cyan Line	The mathematical center of the entry corridor. Used as the anchor for Risk-to-Reward calculations.
Invalidation / Stop Loss	Red Dotted Line	The structural boundary. If price breaches this level, the trade is automatically invalidated.
Take Profit 1 (TP1)	Green Dotted Line	The 2.0R expansion objective. Signals closing partial profit and moving stop to breakeven.
Take Profit 2 (TP2)	Green Dotted Line	The 3.0R structural liquidity target. Major institutional take-profit zone.
Breakeven Milestone	Yellow Dashed Line	Marks the entry price once TP1 is struck, locking in a risk-free position.
Bid & Ask Price Lines	Green (Bid) / Red (Ask) Lines	Shows real-time market spread when the Show Bid/Ask toggle is active.
Execution Markers	Color-coded pins on candles	Exact visual arrows plotted on the specific candle where entry occurred and where targets were struck.

7.2 Chart Controls, Timeframes & Timezones

- **Timeframe Switcher:** Instantly switch candle resolution:

1m 5m 15m (Default) 1h (Structure) 4h 1d
- **Timezone Selector Dropdown:** Choose your local or preferred trading timezone:
 - America/New_York (ET - Killzones) (Recommended)
 - UTC (Universal Standard)
 - Europe/London (GMT/BST)
 - Europe/Berlin (CET/CEST)
 - Asia/Tokyo (JST)
 - Asia/Singapore (SGT)
 - Australia/Sydney (AEST/AEDT)
 - Local (Device Time)
- **Show Bid/Ask Toggle:** Clicking < Show Bid/Ask paints the true live spread on the chart, ensuring you account for spread widening during high volatility.
- **Dark / Light Theme Toggle:** Switch between the institutional midnight dark theme and a clean light presentation.
- **Reset Zoom / Fit Content:** Automatically recalibrates the chart scale to fit all candles and price levels perfectly into the viewing window.

CHAPTER 7 SUMMARY & KEY TAKEAWAYS

- **Interactive Clarity:** All entry zones, stop losses, and take profit lines are visually mapped directly on live candlesticks.
- **Multi-Timeframe Inspection:** Toggle seamlessly between 1-minute tactical execution and 1-hour structural trends.
- **Timezone Flexibility:** Switch between New York Eastern Time and your local device time with a single dropdown selection.

8. RISK MANAGEMENT & THE POSITION CALCULATOR

CHAPTER 08

8.1 The Position & Risk Calculator Modal

Consistent profitability in institutional trading is 90% risk management. The **Position & Risk Calculator** is designed to prevent overleveraging and guarantee strict compliance with prop firm challenge rules.

Clicking  **Calculator** opens the sizing assistant, which automatically pre-fills the signal's Entry Price, Stop Loss, and Profit Targets:

POSITION & RISK CALCULATOR – NQ FUTURES (LONG)
[ESC / × Close]

ACCOUNT BALANCE: ,000

RISK PER TRADE: 1.0%

K

K

K

0.5%

1.0%

2.0%

MAX DOLLAR RISK:

RECOMMENDED POSITION:

PROJECTED PROFIT TP1 (2.0R):

PROJECTED PROFIT TP2 (3.0R):

-.00

2 Contracts

+,000.00

+,500.00

ENTRY: 20,410.50

STOP: 20,398.00

TP1: 20,435.50

TP2: 20,448.00

8.2 Position Sizing Formulas

- Futures Contracts:**

$$\text{Contracts} = \text{Math.floor}(\text{Cash_Risk} / (\text{Distance_in_Points} \times \text{Point_Value}))$$

Example: On NQ (/point), risking with a 12.50 point stop loss yields: $/ (12.50 \times) = / = 2 \text{ Contracts} .$

- Forex Standard Lots:**

$$\text{Lots} = \text{Cash_Risk} / (\text{Distance_in_Pips} \times \text{per Standard Lot})$$

Example: On EUR/USD (/pip), risking with a 20 pip stop loss yields: $/ (20 \times) = / = 2.50 \text{ Standard Lots} .$

8.3 The Golden Rules of Prop Firm Compliance

- ☐ **Rule 1: Never Risk More Than 1.0% Per Setup.** For ,000 or ,000 prop accounts, limit risk to 0.5% – 1.0% (–) to withstand normal market variance.
- ☐ **Rule 2: Execute Hard Stop Losses Immediately.** Never enter a position without setting the Stop Loss in your broker at the exact Invalidation price provided on the card.
- ☐ **Rule 3: Enforce Breakeven at TP1.** Once price reaches Take Profit 1, close 50% of your position and move your stop loss to the Entry Fill price to create a risk-free trade.

CHAPTER 8 SUMMARY & KEY TAKEAWAYS

- Automated Calculation:** Select your account size (K, K, K) and risk % (0.5%, 1%, 2%) for instant contract/lot recommendations.
- Exact Point/Pip Math:** Computes contract sizing based on true underlying tick values (for NQ, for ES, /pip for Forex).
- Preserve Capital:** Strict position sizing guarantees you never breach prop firm maximum daily drawdown limits.

9. LIVE ECONOMIC CALENDAR & NEWS PROTECTION

CHAPTER 09

Macroeconomic announcements (such as US Non-Farm Payrolls, CPI, PPI, and central bank interest rate decisions) cause violent institutional price spikes that can slip stop losses. Manna Edge Markets incorporates a dedicated **Live Economic News Calendar** to protect traders:

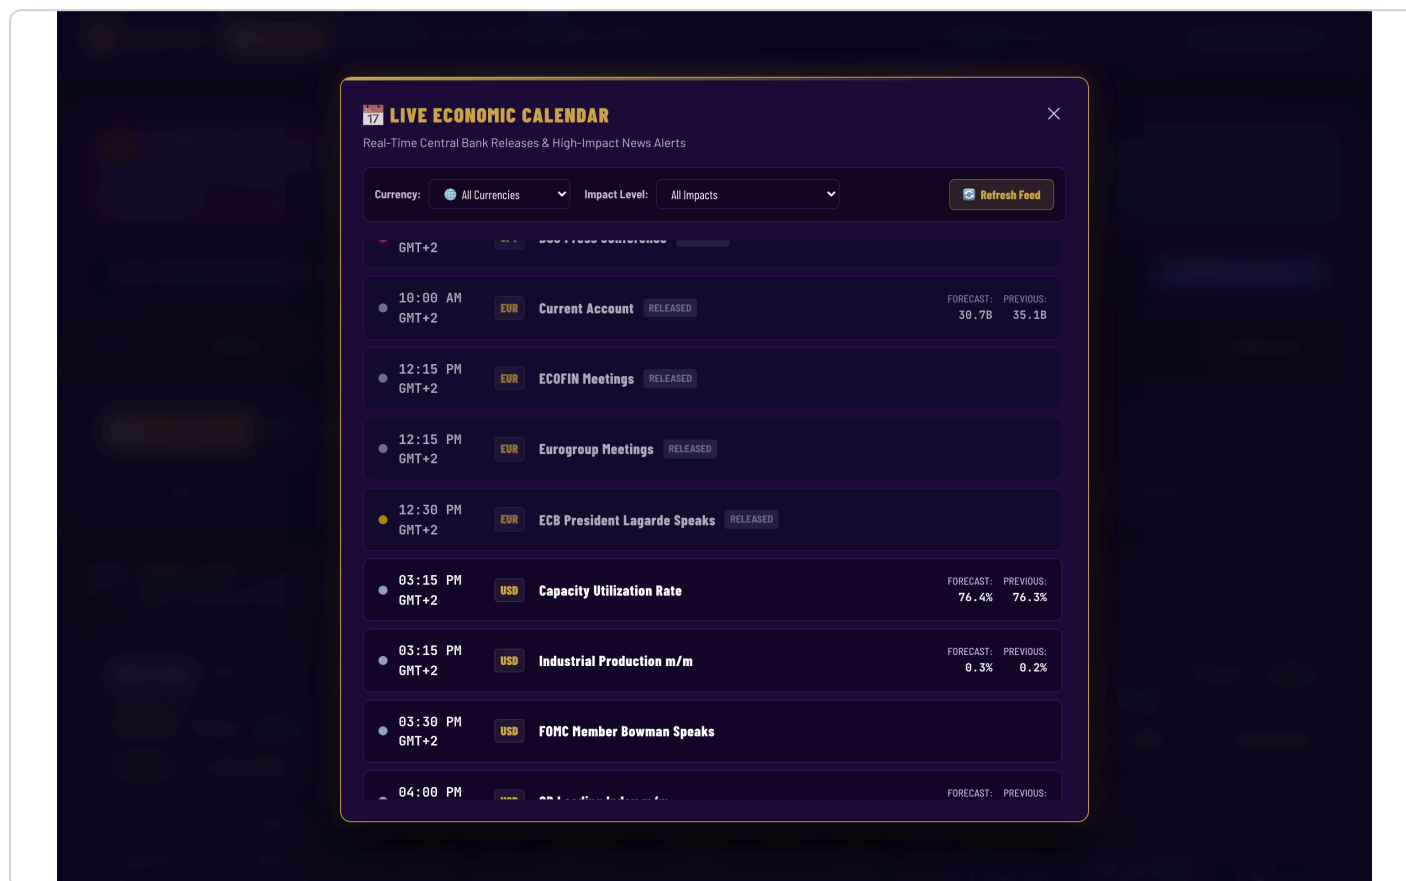

Figure 9.1 – The Live Economic Calendar modal showing central bank releases, impact levels, and release statuses.

9.1 Calendar Controls & Filtering

- **Currency Filter:** Filter announcements by currency (All Currencies , USD , EUR , GBP , JPY , CAD , AUD).
- **Impact Level Filter:**
 - **High Impact (Red Folder)** : Major market-moving releases (CPI, NFP, FOMC, Rate Decisions).
 - **Medium Impact (Orange Folder)** : Secondary releases (Retail Sales, PMI, Trade Balance).
 - **Low Impact (Gray Folder)** : Minor statistical figures.
- **Auto-Scroll Feature:** Upon opening the modal, the calendar automatically scrolls to and highlights the next impending high-impact release.
- **Refresh Feed Button:** Fetches the latest live release figures, forecasts, and revised historical numbers.

9.2 The 15-Minute News Freeze Protocol

⚠ INSTITUTIONAL NEWS SAFETY RULE

When a Red-Folder High Impact announcement is scheduled within **15 minutes**:

- **Do NOT place new pending limit orders.** Spread widening can trigger unwanted fills with excessive slippage.

- **Move active positions to Breakeven.** If you hold an open trade that has not yet hit TP1, either move your stop to breakeven or close the trade prior to release.
- **Resume Trading 5 Minutes Post-Release:** Allow the initial whip-saw order flow to settle before engaging new setups.

CHAPTER 9 SUMMARY & KEY TAKEAWAYS

- **Real-Time News Awareness:** Directly monitor global central bank releases without leaving the trading terminal.
- **Red-Folder Protection:** Never initiate new trades within 15 minutes of high-impact releases like CPI or NFP.
- **Auto-Scroll Alignment:** The modal instantly surfaces the next upcoming volatility catalyst.

10. STEP-BY-STEP CLIENT EXECUTION ROUTINE

CHAPTER 10

To achieve peak performance and long-term consistency, follow this standardized **6-Step Daily Trading Routine**:

Step 1: Check the Master Session Clock & Killzone

Verify whether the current time falls inside an active institutional Killzone (London Open, New York AM, New York PM, Asian). Review the live countdown timer to the next scheduled scan.

Step 2: Inspect the Economic Calendar

Open  **CaLendar**. Ensure no high-impact (Red Folder) announcements are scheduled within the next 15 minutes for the assets you plan to trade.

Step 3: Review the Signal Cards & Decision Matrix

Identify setups marked **AWAITING ENTRY** or **IN ZONE**. Review the Conviction score (aim for 85%+) and ensure the Risk-to-Reward ratio meets your criteria.

Step 4: Launch the Interactive Chart Modal

Click  **Chart**. Verify the entry corridor, confirm the higher-timeframe trend alignment, and check that live price has not already expanded past TP1.

Step 5: Compute Position Size via the Calculator

Click  **Calculator**. Enter your account balance (e.g. ,000) and risk preference (e.g. 1.0%). Note the exact contract count or lot size recommended.

Step 6: Place Your Order with Your Broker

Click  **Copy** on the card. In your trading platform, place a Limit or Market order inside the Entry Zone, set the hard Stop Loss at the Invalidation level, and set Take Profit 1. Once TP1 triggers, immediately advance your Stop Loss to Breakeven.

10.1 Frequently Asked Questions (FAQ)

Q: What should I do if price is already past the Entry Zone?

A: If price has already broken out and is halfway to TP1, do NOT chase the market. Chasing invalidates your Risk-to-Reward ratio. Wait for a retest into the corridor or await the next midpoint rescan.

Q: How do I know when a trade is risk-free?

A: When price strikes TP1, the signal card updates to **RUNNER**, the card flashes a  **BREAK EVEN** badge, and the voice engine announces the milestone. At that moment, move your broker stop loss to your exact entry fill price.

Q: Can I use Manna Edge Markets on mobile?

A: Yes. The web terminal is fully responsive across iOS Safari, Android Chrome, and desktop browsers, providing full chart viewing and calculation capabilities on any device.

MASTER GUIDE CONCLUDING TAKEAWAY

Success in trading is the result of strict process, emotional neutrality, and ruthless risk management. Manna Edge Markets 2.0 equips you with institutional discovery and mathematical precision—your role is simply to execute the rules with unwavering discipline.
